

Modpack

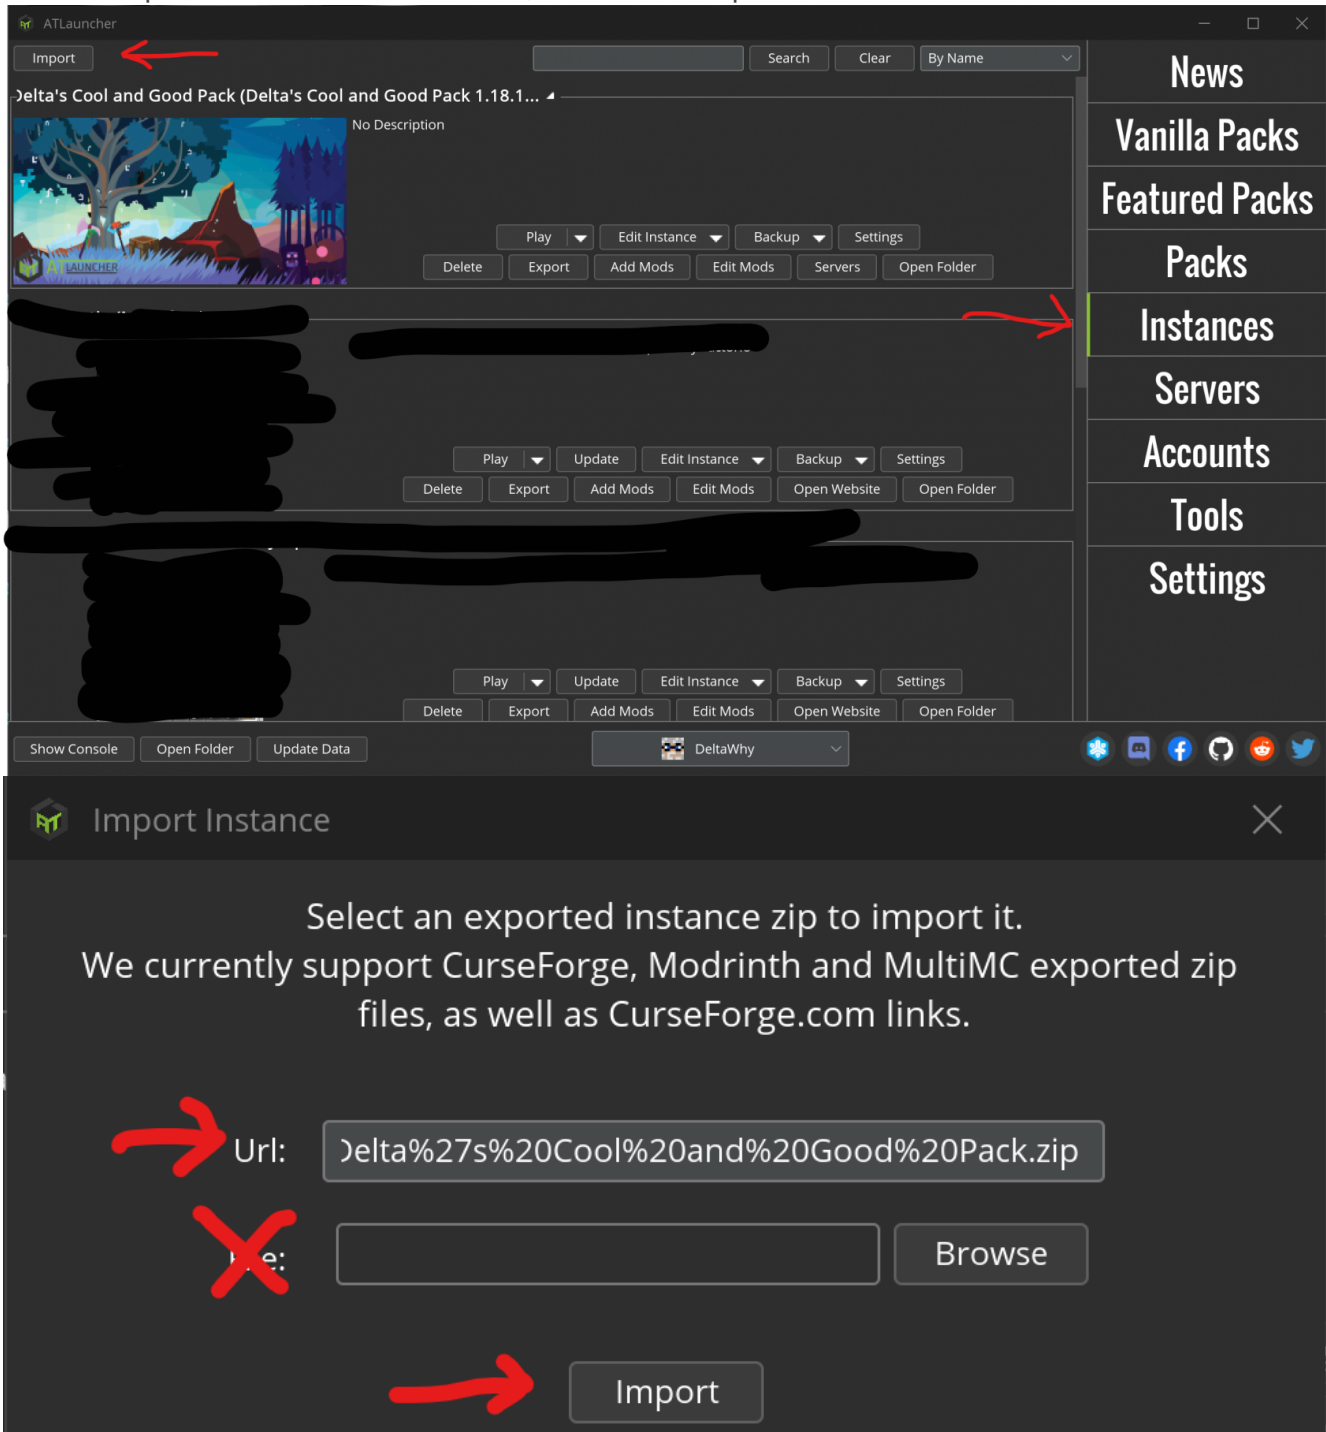

Delta's Cool and Good Pack is a collection of handy mods, resource packs, and shaders for Minecraft 1.19 with Fabric, intended for use on the Deltacraft 7 server. Currently it's a Curseforge format pack, installable with most launchers including ATLauncher, GDLauncher, and MultiMC. Here are install instructions for ATLauncher - if you use another launcher you can figure it out yourself.

Pack URL (no need to download, paste it into the launcher):

<https://deltawhy.me/files/DeltasCoolAndGoodPack-1.19r1.zip>

1. Download and install ATLauncher.
2. Sign into your Microsoft or Mojang account.
3. Go to 'Instances', then click 'Import'.

4. Paste the pack URL into the URL field, then click 'Import'.

5. Sometimes there is an error downloading mods, if so just try it again.

ATLauncher isn't able to check for updates, so when the pack updates you'll have to import it as a new instance and remove the old one (be sure to back up any screenshots, world saves, etc. first).
